Contents

Preface ix

Part I Fundamentals 1

1. Introduction 3

2. Classifications 5
2.1 Computer System Classification 5
2.2 Levels of Parallelism 11
2.3 Parallel Operations 14

3. Petri Nets 17
3.1 Simple Petri Nets 18
3.2 Extended Petri Nets 23
3.3 Sample Petri Nets 25

4. Parallel Processing Concepts 30
4.1 Coroutines 30
4.2 Fork and Join 31
4.3 ParBegin and ParEnd 32
4.4 Processes 33
4.5 Remote Procedure Call 34
4.6 Implicit Parallelism 35
4.7 Explicit versus Implicit Parallelism 36

5. Network Structures 38
5.1 Bus Networks 39
5.2 Switching Networks 39
5.3 Point to Point Networks 45
5.4 Comparison of Networks 50

Exercises I 53

Part II Asynchronous Parallelism 55

6. Structure of a MIMD System 57
6.1 MIMD Computer Systems 58
6.2 Process States 60

7. Synchronization and Communication in MIMD Systems 61
7.1 Software Solution 62
7.2 Hardware Solution 66
7.3 Semaphores 68
7.4 Monitors 78
7.5 Message Passing and Remote Procedure Call 83

8. Problems with Asynchronous Parallelism 87
8.1 Inconsistent Data 87
8.2 Deadlocks 90
8.3 Load Balancing 92

9. MIMD Programming Languages 94
9.1 Concurrent Pascal 94
9.2 Communicating Sequential Processes CSP 95
9.3 occam 98
9.4 Ada 101
9.5 Sequent-C 103
9.6 Linda 106
9.7 Modula-P 111

10. Coarse-Grained Parallel Algorithms 116
10.1 Bounded Buffer with Semaphores 116
10.2 Bounded Buffer with a Monitor 119
10.3 Assignment Distribution via Monitor 121
10.4 Asynchronous Simulation 123

Exercises II 124

Part III Synchronous Parallelism 131

11. Structure of a SIMD System 133
11.1 SIMD Computer Systems 134
11.2 Data Parallelism 137
11.3 Virtual Processors 138

12. Communication in SIMD Systems 142
12.1 SIMD Data Exchange 143
12.2 Connection Structures of SIMD Systems 146
12.3 Vector Reduction 150

13. Problems with Synchronous Parallelism 152
13.1 Indexed Vector Operations 152
13.2 Mapping Virtual Processors onto Physical Processors 153
13.3 Bottlenecks from Peripheral Attachments 154
13.4 Network Bandwidth 156
13.5 Multi-User Operation and Fault Tolerance 157

14. SIMD Programming Languages 158
14.1 Fortran 90 158
14.2 C* 165
14.3 MasPar Programming Language 170
14.4 Parallaxis 173

15. Massively Parallel Algorithms 180
15.1 Numerical Integration 180
15.2 Cellular Automata 182
15.3 Prime Number Generation 184
15.4 Sorting 185
15.5 Systolic Matrix Multiplication 187
15.6 Generation of Fractals 189
15.7 Stereo Image Analysis 192

Exercises III 197

Part IV Other Models of Parallelism 203

16. Automatic Parallelization and Vectorization 205
16.1 Data Dependence 207
16.2 Vectorization of a Loop 213
16.3 Parallelization of a Loop 214
16.4 Solving Complex Data Dependences 220

17. Non-Procedural Parallel Programming Languages 225
17.1 *Lisp 226
17.2 FP 229
17.3 Concurrent Prolog 234
17.4 SQL 239

18. Performance of Parallel Systems 241
18.1 Speedup 241
18.2 Scaleup 245
18.3 MIMD versus SIMD 247
18.4 Validity of Performance Data 251

Exercises IV 253
